Dear Friends and Supporters,

I am fresh out of the field and have just returned home to Boston after a magnificent summer in Borneo! It was a busy and exciting time and it was so good to connect with the whole Yayasan Palung/GPOCP team.

There is so much news to share, including a recent major change in staffing on the US-side of the project. Natalie Robinson, our Program Coordinator based in Boston for the last three years, will be beginning a new chapter as a PhD student at Rutgers University. Natalie began her journey with GPOCP as a student at Boston University, completing an award-winning undergraduate honor's thesis on water soluble carbohydrates in the orangutan diet. She then spent a year working as a volunteer at Cabang Panti Research Station before joining the leadership team. Natalie will still be studying orangutans so we expect to see more of her (and hear from her in a future Code Red article!). We wish her the very best as she embarks on this new and exciting journey. At the same time, we are welcoming a new Deputy Director to GPOCP, Dr. Caitlin O'Connell. Caitlin was my PhD student and graduated in January 2018, having studied orangutan sociality and health in Gunung Palung. She comes to us most recently from the University of Pennsylvania. You will hear more about her and this change in upcoming issues of Code Red as well. Caitlin also just came back from a summer visit to Ketapang and Cabang Panti – a real homecoming!

IN THIS ISSUE:

Sharing Love for Orangutans on World Orangutan Day 2023

Wild Orangutans in the Heart of Borneo with the Leakey Foundation

Join Save Wild Orangutans

DONATE
Our first article this month was written by Petrus Kanisius (Pit), our Media Coordinator and Environmental Education Officer based in Ketapang. Pit tells us about the activities and events that our Environmental Education Team held to commemorate World Orangutan Day which falls on August 19th each year.

The second article is my account of an exciting visit we had at the research station this summer. It is not every day that the camp gets special visitors, and we were honored to have members and friends of the Leakey Foundation come see our research first-hand and experience the one-of-a-kind Cabang Panti Research Station.

I wish you all a happy September as we embark on a new school year here at Boston University!

Sincerely,

Cheryl Knott, PhD
Executive Director
Gunung Palung Orangutan Conservation Program (GPOCP)

---

Sharing Love for Orangutans to Commemorate World Orangutan Day 2023

By Petrus Kanisius, Media Coordinator and Environmental Education Officer

Every August 19th is World Orangutan Day (WOD) – a day to support and encourage all of us to care about the fate of this highly endangered primate. This year the theme for World Orangutan Day was “Love for Orangutans.” Gunung Palung Orangutan Conservation Program/Yayasan Palung carried out a number of activities in different geographic areas to commemorate WOD this year.
Our Environmental Education team celebrates World Orangutans Day in one of our Hutan Desa villages, Desa Penjalaan.

World Orangutan Day in North Kayong District

At our Bentangor Environmental Education Center in Pampang Harapan Village, we delivered a lecture to Bentangor Kids about orangutans, their biology, threats they face, and how we can protect them. The kids also watched a series of short videos and learned our song “Si Pongo,” about a young orangutan and his need for the forest.

We held similar events in one of our Hutan Desa villages, Penjalaan Village, with schoolchildren from the Simpang Keramat Kids group there. The event was introduced by Environmental Education Officer Simon Tampubolon and everyone sang together. Widiya, our Environmental Education Manager, presented material about orangutans and their behavior, followed by a screening of short videos about orangutans. The group then learned the Si Pongo song, answered quiz questions about orangutans, and we closed the event with a group photo. The following day, students in Simpang Tiga Village at SDN 8 Siduk had the chance to do the same fun activities to share their love for orangutans.
Collaborative World Orangutan Day Activities in Pontianak

Some of our staff traveled to Pontianak, the capital of West Kalimantan, to participate in additional World Orangutan Day celebrations there at GAIA Mall Kubu Raya. Yayasan Palung worked together with Titian Lestari Foundation and Keep Earth Borneo to carry out a number of events. We put on one of our orangutan Puppet Shows that featured the Nature Rangers Cadets Conservation Volunteers (RK-TAJAM) and the West Bornean Orangutan Caring Scholarship (WBOCS) recipients. They told about orangutans and their life in the forest to the younger children who also took part in a drawing competition organized by the Titian Lestari Foundation with Keep Earth Borneo.

Riduwan, Environmental Education Officer in our Bentangor office, was also invited to be a guest speaker at the WOD event. Ridwan explained Yayasan Palung as an organization and what we do to conserve orangutans. He also explained the important role of orangutans as forest farmers and orangutans as endangered protected animals.

On August 24th we held a talk show on Radio Kayong Utara (RKU) for World Orangutan Day. Rabina (REBONK Volunteer) and Riduwan discussed the theme "World Orangutan Day 2023".
Our team putting on a puppet show for children (top) and Riduwan participating in a panel discussion on orangutans (bottom) as part of a large World Orangutan Day celebration event at a mall in Pontianak.

World Orangutan Day in Ketapang Regency

We held World Orangutan Day activities in Ketapang at three schools including SMP Negeri 02 Matan Hilir Selatan, MTs Negeri 02 Matan Hilir Selatan, and SMKN 1 Matan Hilir Selatan. Widiya (Environmental Education Manager), Haning (Environmental Education Officer) and myself, Pit, conveyed messages about what World Orangutan Day is, how it falls on August 19 each year, and why it is important. The students listened to a presentation with information about orangutan behavior and biology. We gave a fun quiz on orangutan facts and a series of environmental films were shown, including orangutan short films and a video about Gunung Palung National Park. We closed out these events with group photos of our enthusiastic students sharing their love for orangutans.

Haning giving a presentation to students in Ketapang as part of a series of lectures commemorating World Orangutan Day 2023.
Wild Orangutans in the Heart of Borneo with the Leakey Foundation

By Cheryl Knott, Executive Director

As a child growing up in the 1960s, I remember being enraptured by the grandfatherly Louis Leakey describing his discoveries of human fossil ancestors in National Geographic TV specials. This ignited a lifelong interest in trying to understand where we came from, how we got here and why we are the way we are that has remained at the core of my intellectual journey. Louis Leakey recognized that the study of living apes provides another window into the human evolutionary past and supported some of the earliest great ape research. Much of our research on wild orangutans is tied to developing a deep understanding of one of the few remaining ape species to help inform our understanding of human evolution and what led us down the path that distinguishes us from the other living apes. As I became a biological anthropologist and set out to study wild orangutans, I reached out to the Leakey Foundation, founded in 1968 to help support Leakey’s research, and was awarded one of the core grants that allowed me to start the Gunung Palung Orangutan Project. Since then, our project has been awarded 11 grants by the Foundation.

It was thus with much gratitude that this summer we were honored to host members of the Leakey Foundation and associates on a special trip to Gunung Palung National Park. Joining us were Jeanne Newman, President of the Foundation, Trustee Chester Kamin, Professor Richard Wrangham, Timothy Bradley, Michael Brower, and Sally Cheffy. This was a very special trip and we are grateful to the Gunung Palung National Park authorities for making this possible. It took several months of preparation by our staff to make a visit to our remote research camp a reality and here is the story of that journey.

The group flew into our small airport in Ketapang, West Kalimantan, Indonesia, on August 12. After a delicious late lunch we stopped by the Yayasan Palung office where trip members got to see our conservation project headquarters. There they had a full overview of how we store the plant, fecal and urine samples that we collect at the research station before they make their way to one of the laboratories we use for analysis. An unexpected surprise at the office was the arrival of durians that, lucky for us, were in season. The group was game to try, most for the first time, this much-loved, but pungent, fruit.
That evening we all enjoyed a welcome banquet at the Hotel Grand Zuri that started off with traditional Dayak and Melayu dancing performed by members of our youth conservation group. I gave an overview of the work of the Gunung Palung Orangutan Conservation Program and we watched videos during dinner about each of GPOCP’s programs. Attendees included our staff as well as representatives from the Gunung Palung National Park office who co-hosted the visit. Ibrahim Sumardi welcomed the guests on behalf of the National Park, and Jeanne Newman and Richard Wrangham shared some words.

Sunday we left bright and early to head to the Sukadana region, our jumping off point for visiting the National Park and the center of our sustainable livelihood and conservation outreach and education activities. Members of the Tanjung Gunung Fish Farming Cooperative were thrilled to welcome us to see their fish ponds in operation and to learn how these are providing sustainable alternative income to ten families. We discussed the steps involved that have made this a productive enterprise and how the model has been replicated in several other villages.
Our next stop was Bentangor – our Environmental Education Center. We were surprised to be greeted by an amazing traditional Melayu martial arts demonstration by youth group members and marveled at their grace and skill. As we approached Bentangor, Erik Kurniawan, our Animal Protection Manager, welcomed us fully attired in his traditional Dayak wedding clothes, and presented each guest with a Yayasan Palung ikat sash. Inside, we watched a performance, along with a 6th grade class, of one of our puppet shows that teaches about endangered species in these forests and their need for protection. We joined in enthusiastically to the singing of Yayasan Palung’s trademark song "Si Pongo". This was followed by a walk with the students through the small forest on our land, that showcases traditional plants and how they are used for medicinal and sustainable purposes. The visit ended with a stop at our Sustainable Handicrafts Showroom.
From top: Guests were greeted at Bentangor by a traditional Melayu martial arts demonstration; were presented with Dayak sashes; watched a puppet show on endangered species; learned with students about the fruits of rainforest trees.

After a hearty Indonesian lunch at Pondok Bakau, and a rest at the Mahkota Hotel Sukadana, we headed back out to visit the Sustainable Livelihoods workshop of our traditional handicraft leader, and environmental hero, Ibu Ida. She showed us how *pandanus* leaves are woven into traditional handicrafts and Pak Darwani gave us a remarkable demonstration of how he can transform *Nipah* fibers into a basket. Next stop was a visit to the Meteor Garden organic agriculture plot. One of our oldest sustainable livelihoods, organic agriculture has allowed people such as Pak Dat to turn from illegal logging to a sustainable alternative livelihood. The day was capped off with a lovely sunset, coconuts on the beach and a Korean-style 'steamboat' dinner back at the Mahkota.
On Monday the real adventure began as we loaded into 3 small wooden boats at Rantau Panjang and began the trip upriver to the Cabang Panti Research Station. The low water level was a real, but not unexpected, challenge and once we reached the forest, we pushed and pulled the small boats upriver through the dark. One very unexpected stop along the way was our first view of a wild orangutan – a flanged male that, although far from the study population, was remarkably habituated.
He gazed at us, seemingly unperturbed, lying down along a branch, and even provided a fecal sample, which I collected! Our 11-hour journey ended with a very welcome reception at the field station, a hot dinner, and the presentation of sarungs which the guests donned throughout the week.
From top: The boat trip upriver - Sally and Michael; Jeanne and Tim; Richard and Chet; An unplanned stop to look at the flanged male we encountered on the side of the river; the male photographed by Michael Brower; Dinner and relaxation after a long day on the river!

Tuesday brought a full day of following the ever-cooperative orangutan Bibi and her 8-year-old son, Bayas. Our trekking took us wading across the Bayas River twice, as we chased the orangutans through the freshwater swamp. After a leisurely lunch in the forest, some headed back to camp while
others stayed on and were rewarded by even better up-close views of these endangered apes navigating through their native habitat. That evening brought another delicious dinner, prepared by the camp and Yayasan Palung staff. That evening we watched the award-winning Person of the Forest video that was produced by Melissa Lesh and Tim Laman, featuring project members as well as National Park Technician Endro Setiawan and Professor Wrangham. The video is very much on theme with the aims of the Leakey Foundation, explaining why studying great apes is important for our understanding of human evolution.

Looking up at the orangutans.

The orangutans were far off on Wednesday and so we started the day by learning about all of the lab and research activities we carry-out at the station. Guests saw how we use our field wet lab to process fecal and urine samples and viewed parasites through our microscope. Upstairs they learned about the processing of fruit and other food samples for identification. True to custom, Professor Wrangham, tried some of the *pandanus* pith that the orangutans had eaten the day before. It was gratifying to be able to show the Leakey Foundation members how we are able to noninvasively collect and analyze samples to learn about orangutan physiology and nutritional intake – techniques that I first started with their support back in 1994! Since then we have added a host of other techniques, such as a laser camera and thermal drone. Early risers this morning even witnessed our first detection of an unknown orangutan using our new thermal drone!
The afternoon took us on a forest botany walk with National Park Technician and botanist Endro Setiawan as well as Project Botanist Gunawan Wibisono. We stopped by the microhydro – first built in 2018 – so we could see where the electricity the camp was using was coming from and learned about some of the improvements we hope to make in the system. A late afternoon bird walk as well as swimming in the crystal-clear waters of the Air Putih River rounded out our day. I was happy to present an overview of the research project and what we have learned over the past 30 years during our evening meal.
Our last full day at camp started out with an optional 4:00 am trek to unnest Bibi, led by Jessica Laman, Sam Vee and Caitlin O’Connell, and joined by Tim Bradley. The day was the 17th of August – Indonesia Independence Day – and the group was able to experience the patriotic and fun way that Independence Day is celebrated in Indonesia. We had a full morning flag ceremony, led by the National Park, and including all staff members and researchers. This was followed by a series of fun games, that intentionally put people in light-hearted positions. Attaching a colander hat to a rope,
walking on all fours using blocks, using a hip swinging bottle to advance a ball, and carrying 3 balloons through an obstacle course brought hilarity to both participants and observers.
Staff and researchers celebrate Indonesian Independence Day (top), followed by games in the yard!

The afternoon led us all to Big Rock, a small waterfall and swimming pool, where guests and all project staff enjoyed the refreshingly cool water. Tim and Michael even ventured to the larger waterfall further upriver. That night was our farewell celebration – with a barbecue of chicken and corn-on-the-cob, a running outdoor slideshow of Gunung Palung's remarkable biodiversity, and hours of singing and companionship.
Swimming at Big Rock in the Air Putih River and our evening farewell celebration.

Our final day saw us downriver after the requisite group photos to remember the friends gained over the last few days. Most group members left via long boat, and saw Proboscis Monkeys, Silvered Langurs, Long-tailed Macaques, and birds such as the Long-tailed Parakeet, Imperial Pidgeon, Greater Billed Heron and Greater Coucal. We topped it off by a gorgeous sunset as we arrived in the riverside village of Semanjak. Others ventured to walk out where they were able to see our new satellite camp at the Rangkong Research area. Reuniting in Ketapang over a late dinner at our favorite restaurant, we then headed off to much deserved showers and sleep before our return plane journeys the next day.
A final group photo of all guests, staff and researchers (top) and the trip downriver from Cabang Panti Research Station.

It was truly a thrill to be able to share such special adventures with this remarkable group of travelers! After thirty years of research and many Leakey Foundation grants it felt like the least that we could do to thank them for their support of the project. Cabang Panti is a difficult place to reach, and hats off to the Leakey Foundation members and friends for being willing to put up with some discomforts to have what I hope was a truly remarkable adventure at a remote research enclave in the middle of Gunung Palung National Park. Your visit will be remembered for years to come! And a special thank you to the leadership of the Gunung Palung National Park Office for making this possible.
Management of Cabang Panti Research Station is conducted by the Gunung Palung National Park Office (BTN-GP) in collaboration with GPOCP/YP. Scientific research is carried out in conjunction with the Universitas Nasional (UNAS) and Boston University.

“Conservation is a state of harmony between men and land.”

– Aldo Leopold
